

## POST Application Challenge

Your task is to build a fully functionalized Post application using supabase within the provided specifications.

## Task Description

1. **Supabase Integration:** Set up supabase in your project to handle authentication, database & storage.
2. **Signup and Login Pages**
  - Design and develop both a **signup page** and a **login page**.
  - Use supabase Authentication to enable users to create accounts and log in.
3. **Post Management Features**
  - Allow users to **create posts**.
  - Implement functionality to **add new posts, edit existing posts,** and **delete posts** using Storage.
4. **Feed Page with Categories**
  - Develop a **feed page** where users can view posts from other users.
5. **Commit Your Changes:** Make regular commits to track your progress as you build the application.
6. **Push Your Solution:** Set up a GitHub repository to host your solution and push your completed work.
7. **Host Your Application:** Deploy your blog application using Firebase Hosting or any other preferred hosting service.
